2. Freezed

1. Annotation 기반 Code generation

```
@freezed
class ClassA with _$ClassA {
   const factory ClassA({
     int? a,
     String? b,
   }) = _ClassA;

factory ClassA.fromJson(
   Map<String, dynamic> json,
   ) =>
    _$ClassAFromJson(json);
}
```

2. 생성자 및 속성 자동 생성

```
final classA = ClassA(a: 0, b: 'test_a');
print(classA.a);
print(classA.b);
```

3. 객체를 cloning 해주는 copyWith method 제공

```
final classB = classA.copyWith(a: 1, b: 'test_b');
```

Gnb 개발 -Data Layer

2. Freezed

flutter pub add freezed_annotation

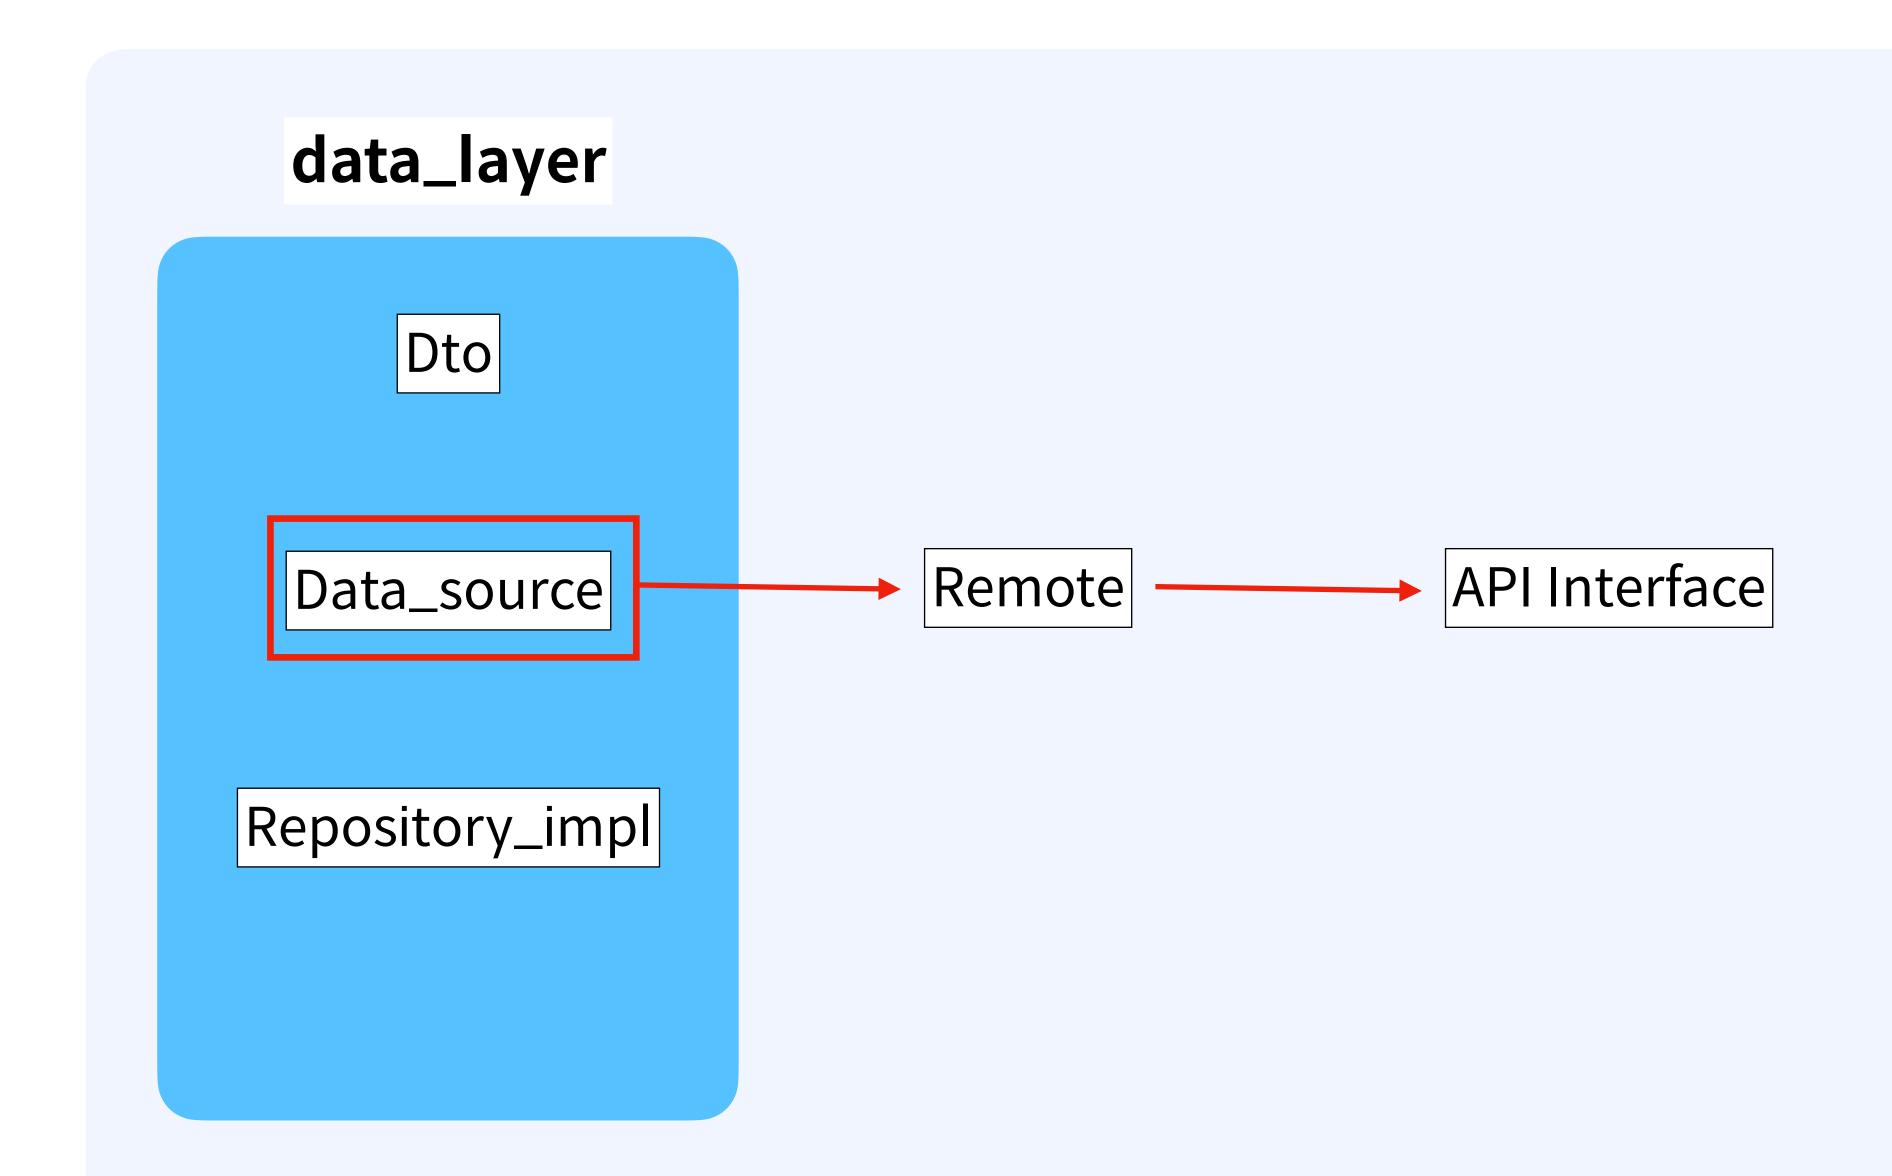

flutter pub add json_annotation

flutter pub add --dev freezed

flutter pub add --dev build_runner

flutter pub add --dev json_serializable

3. API 통신

Gnb 개발 -Data Layer

4. network관련 패키지 (Retrofit)

Retrofit (ver 4.0.1 강의 기준) https://pub.dev/packages/retrofit

flutter pub add retrofit flutter pub add -dev retrofit_generator

Gnb 개발 -Data Layer

4. network관련 패키지 (Dio)

Dio (ver 5.3.0 강의 기준) https://pub.dev/packages/dio

flutter pub add dio

Let's start coding!
